JANUARY 2012**

Highly mobile and easy-to-handle pumps from GAAM

GAAM Emergency Products offers two Spechtenhauser specialty pumps which are lightweight and compact for easy mobility and handling.

The **Woody** has a three-phase 400V/50Hz motor and boasts a capacity of up to 2200 l/min. Primarily designed for de-watering and moving large quantities of water around, the pump is blockage-free for solids up to 80mm in size and can operate continuously when used with 6.5kVA generators. With its small dimensions, low 53kg weight and a carrying frame with four folding handles and abseiling eyelet, the pump is easy to carry around and simple to handle.

The pump, which is dry run safe because of its impeller cooling system, features a slurping operation and is capable of low level pumping down to a few millimetres depth due to its patented flat intake socket.

Offering further versatility is the **Mini Woody** pump, which can be fitted with either an ac 230V/50Hz motor or three-phase 400V/50Hz motor. The pump's capacity reaches up to 1400 l/min with continuous operation possible using 3kVA generators (B1000 version) or 5kVA generators (all other versions).

At just 29kg in weight and with a central carrying handle and abseiling eyelet as well as a carrying frame with an integrated cable rewind, it is also a highly convenient and easy-to-use solution. The unit is blockage-free for solids up to 55mm in size and enables low level pumping down to a few millimetres depth thanks to its patented flap system.

Both models are available with a number of accessories, including PVC spiral hoses, non-returnable flaps and separate float switches.

For more information about the pumps contact GAAM Emergency Products on 03 9464 8400 or visit www.gaam.com.au.
