

Stilwell Flyer

Description

Stilwell Flyer™ helicopter slung containers permit efficient transportation of water, foam retardants and potable water. May be slung from helicopters in configurations of one or more.

Fabric

Stilwell Flyer containers are constructed from PVC coated woven polyester fabric which has excellent flexibility and strength characteristics.

- > The fabric is rip stop constructed which prevents tears from spreading.
- > Double side coating for easy cleaning
- > All-welded construction
- > Remains flexible at low temperatures

Design

Stilwell Flyers are effective on remote, steep sloped terrain. The Stilwell Flyer is transportable by helicopter with long line delivery. The engineered design eliminates twisting and residual bounce in flight. Stilwell Flyer containers are available for standard water (not for human consumption) and potable water (drinking water).

Fireflex uses a U.S. Food and Drug Administration approved fabric for all potable water tanks. The potable Stilwell Flyer ensures drinking water availability for all fire fighting crews regardless of locations.

Capacities

- > Stilwell Flyer 60 | 273 Litres
- > 60 Imperial Gallons | 72 U.S. Gallons
- > Gross weight 612 lbs. | 278 Kg.
