Rescue packs contribute to efficiencies in an emergency

Emergency rescue demands careful preparation and intelligently-designed equipment to ensure maximum efficiencies are achieved in a crisis situation.

Helping emergency rescue teams operate efficiently, Wolfpack Gear's rescue packs are developed by search and rescue professionals and firefighters in order to meet the rigorous demands of emergency services personnel. Each pack is designed to perform in extreme conditions and combines intuitive design, sophisticated technology, durable materials and solid construction, delivering safety, strength and comfort.

GAAM Emergency Products is now distributing Wolfpack Gear's premier USAR and Wildfire range. The components in the range each have a specific and vital purpose.

The USAR range is designed and developed for Urban Search and Rescue professionals. Among the USAR range is a **Web Harness** that has been crafted to offer versatility in the field. It features a tough suspension system that can be easily adapted to each stage of an emergency response. The comfortable harness can be quickly attached to a USAR web belt and pre-fitted to the user so as to be prepared ahead of a mission.

The **USAR 72-Hour Back Pack** is a light and compact deployment pack for carrying personal clothing and toiletries. A day pack can be detached from the main harness with four side release buckles for basic essentials.

The **USAR Search Marking Kit** contains the numerous marking tools needed during a search operation. The main holster pocket fits a marking paint can and below the holster are two flagging tape dispensers. Exterior covered pockets accommodate railroad chalk, lumber crayons, permanent markers and other pens. The kit's waterproof zippered pocket is ideal for glow sticks.

Recently redesigned to offer increased efficiency, the **USAR Phantom Radio Chest Harness** provides a thick mesh shoulder harness to eliminate tangling and provide maximum comfort. A unique strap management system reduces loose webbings for a cleaner fit. Two radio pockets easily adjust to every size of radio and two adjustable utility pockets hold an extra clam shell battery and a mobile or GPS unit. The full size map pocket is now accessible from the top and side with an interior organiser and pen pockets.
